File List

– List of Files used in the Front-End & Descriptions

About.php	Displays a user-configurable "About" page. The bulk of the content for this page is stored in the file "lib/staticContent/about.html".
Browse.php	Allows users to browse the collection. Internally, browsing is nothing more than searching the collection with fixed search parameters, and with a different interface.
createAccount.php	Used to allow unregistered users to create an account.
createEditModule.php	Not used, will be removed. Originally was used to handle all aspects of creating and editing modules. These tasks have now been moved into the files in the "moduleWizard/" subdirectory.
createModule.php	Not used, will be removed. Originally was used to handle initial module creation. This task has been moved to the "moduleWizard/basicModuleInformation.php" and "moduleWizard/welcome.php" files.
forgotPassword.php	Allows users to recover forgotten passwords by either sending their password to their email address or by resetting their password and sending them the new password.
Index.php	Displays a home page for the collection. The bulk of the content for this page is stored in the file "lib/staticContent/home.html".
loginLogout.php	Handles logging users in and voluntarily logging a user out.
Moderate.php	Allows Editors and Administrators to moderate in-system modules, which are pending moderation, such as approving or denying such modules.
moduleManagement.php	Allows Editors and Administrators to manage all aspects (except approving or denying moderation requests) of all modules in the system. The master module management page.

Search.php	Handles searching modules, displaying search results, and displaying an "Advanced Search" form.
showMyModules.php	Shows modules belonging to the logged in user, along with basic management tools for those modules. A "module management" tool for a user's own modules.
userManageAccount.php	Allows a user to manage their account, and no one else's.
userManagement.php	Allows administrators to manage all aspects of all users on the system. A "master user management" console.
viewModule.php	The standard module viewer. Handles viewing of modules, as well as access restrictions.
lib/frontend-ui.php	Contains functions used throughout the user interface of the system. Not intended to be accessed directly by users.
lib/moduleEditUploadHelpers.php	Contains functions used throughout the module upload/submission/edit process. Not intended to be accessed directly by users.
lib/backends/backend.php	Imported by all files which require any back-end storage features. Selects the back-end used by the system.
lib/look/look.php	Imported by all files which require any skinning. Selects the theme/look of the system.
lib/staticContent/about.html	Contains static HTML which makes up the "About" page body. Used by about.php.
lib/staticContent/home.html	Contains static HTML which makes up the "Home" page body. Used by index.php.
lib/tiny_mce/*	Files for the TinyMCE editor (LGPL, from tinymce.moxiecode.com, not modified by this system)
configureCollection/index.php	The main configuration panel, with links to various configuration aspects of the system.
configureCollection/configureCategories.php	Allows viewing, adding, and removing categories used in the collection.
configureCollection/editStaticPages.php	Allows editing and saving the static content pages in the lib/staticContent directory. Uses the TinyMCE editor to improve interface, and is designed to be called from the configureCollection/index.php file.

moduleWizard/basicModuleInformation.php	Allows users to input basic module information. Also responsible for creating new, initially empty modules and new versions of modules. The second page of the Module Submission Wizard.
moduleWizard/crossReferences.php	Allows users to build cross-references and external references between modules and other sources.
moduleWizard/delete.php	Deletes a module from the system, and all materials exclusively used by that module. Also provides a confirmation page. Restricts deletion to only a user's own, non-active modules, except for Editors and Administrators.
moduleWizard/final.php	The final stage of the Module Submission Wizard before final submission. Collects comments and the minimum user type which may access the module.
moduleWizard/materials.php	Allows the creation of materials and attaches them to modules. Step 4 of the Module Submission Wizard.
moduleWizard/prereqsTopicsObjectives.php	Displays and allows editing and creation of new prerequisites, topics, and objectives for a module. Step 3 of the Module Submission Wizard.
moduleWizard/save.php	Saves all progress of a module, and ends the Module Submission Wizard. Note that this file should only be used if the action desired is to save progress AND end the wizard. For saving progress only, used the functions in lib/moduleEditUploadHelpers.php
moduleWizard/submit.php	Collects final information necessary to submit/publish a module, and either publishes a module or submits it for moderation. The absolute final stage of the Module Submission Wizard.
moduleWizard/welcome.php	The first page of the Module Submission Wizard. Introduces the submission process, collects a module title if needed (for new modules), and determines the proper action to take regarding module creation (edit, create entirely new, or create new version).

oaiProvider/index.php	A home page for the OAI-PMH provider. Contains information on the provider. Mostly static.
oaiProvider/provider.php	The file accessed by OAI-PMH harvesters. Actually serves OAI-PMH harvest requests. Depends on the files in the oaiProvider/lib directory to function.
oaiProvider/lib/badArgument.php	Functions for handling bad arguments passed to the OAI-PMH provider.
oaiProvider/lib/config.php	Basic configuration for the OAI-PMH provider.
oaiProvider/lib/dateFunctions.php	Functions used for date handling within the OAI-PMH provider.
oaiProvider/lib/getRecord.php	Functions used to process "GetRecord" requests to the OAI-PMH provider.
oaiProvider/lib/helpers.php	Functions used throughout the OAI-PMH provider.
oaiProvider/lib/identify.php	Functions used to handle "Identify" requests to the OAI-PMH provider.
oaiProvider/lib/index.html	Garbage, not used. Will be removed.
oaiProvider/lib/listIdentifiers.php	Functions used to handle "ListIdentifiers" requests to the OAI-PMH provider.
oaiProvider/lib/listMetadataFormats.php	Functions used to handle "ListMetadataFormats" requests to the OAI-PMH provider.
oaiProvider/listRecords.php	Functions used to handle "ListRecords" requests to the OAI-PMH provider.
